

Liiiv Stoma measuring guide

Print at 100% (Actual size). Do not choose Fit to page. If the 100 mm bar is not 100 mm on a ruler, do not cut this sheet.

Cut out each shaded circle. Hold the sheet over the stoma and pick the closest hole that does not sit on the stoma. Your nurse sets how much gap is right. These holes are opening sizes, not a recommended gap.

This does not replace the guide in the box, or a measurement by an NSWOC.
